Customer Case Study - Carbon Reduction Commitment

Market Sector

Automotive dealerships; Car & Van Rentals.

Scope & Scale

Turnover £3.5bn; 200 dealerships; 183 Service, Accident & Parts Centres.

Background

Founded in 1954, Arnold Clark Automobiles Limited is one of the largest car dealer groups in Europe. Having been made aware of their Carbon Reduction Commitment (CRC) obligations - a mandatory emission trading scheme that places significant energy monitoring and reporting burdens on organisations of their size - Arnold Clark approached Envantage, whose CRC services are designed to save money by removing the monitoring, reporting and administration burden - and also by ensuring full compliance and audit support.

Solution & Outcome

Envantage has therefore managed Arnold Clark's CRC from the beginning of the scheme to date, closely monitoring their ever-changing portfolio of sites (currently over 200) and recently passing an external Environment Agency CRC audit, for which very positive feedback was received from the Environment Agency auditor with particular reference to the quality of information provided.

"Our CRC obligations have been well managed and I've been Impressed by the knowledge and prompt support received from Envantage. Their people have developed a first-class service and I would not hesitate to recommend them." D Shaw, Arnold Clark Automobiles Limited.
